## Having debt is no walk in the park!

This month you'll pay over \$1,100 in interest alone. That's $55 \%$ of your monthly payment ...gone!

On average over the next 30.0 years your bank's plan will cost you more than $\$ 500$ per month in interest.

You'll spend $\$ 3.85$ for every $\$ 1$ you pay down in principal on your mortgage this month.

It will be January 2037 (when you are 62 years old) before you have paid off half of your debt and you will still owe over \$133,000.
